

LUMCOVE :

## COVE SET-UPS

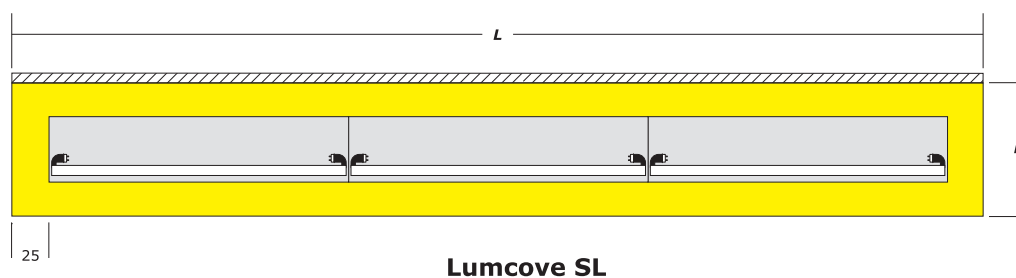

Lumcove luminaires are the perfect solution to create indirect continuous lines of light. Any configuration of linear light lines can be solved with Lumcove, whether it is a simple straight line, an L-form, square or rectangle.

When you ask for an estimate, you only need to supply us with the basic cove dimensions. For each set-up we can determine for you which type and how many modules will be required to obtain the best results.

Information required for estimating/order:

L or L1, L2, L3 and L4:	total inner cove length in mm
B or B1, B2:	inner cove width in mm
A:	inner height of the vertical upstanding edge in mm
Lamp colour:	827, 830 or 840
Luminous flux:	fixed or variable (with dimming)
Dimmer systems:	DS1, DS2, DAD, DIR, DAL

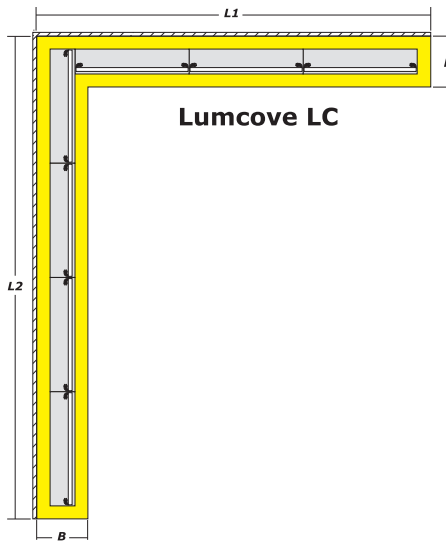

### 1. CONTINUOUS STRAIGHT LINE

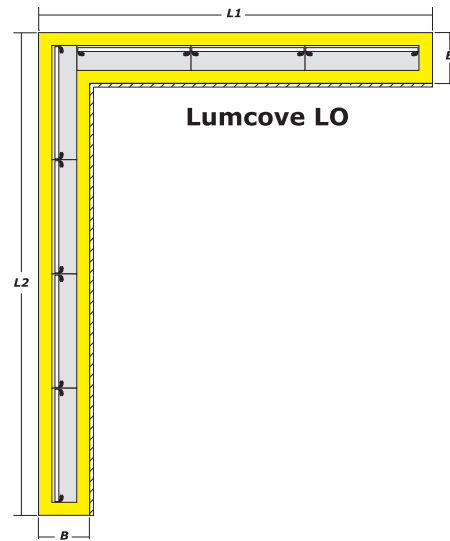

Dimensions required for estimating: **L and B**

## 2. CONTINUOUS LINE IN L-FORM

Cove with central opening

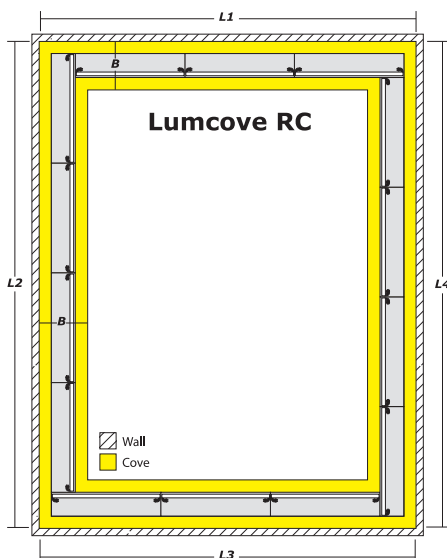

Cove with opening at the outside

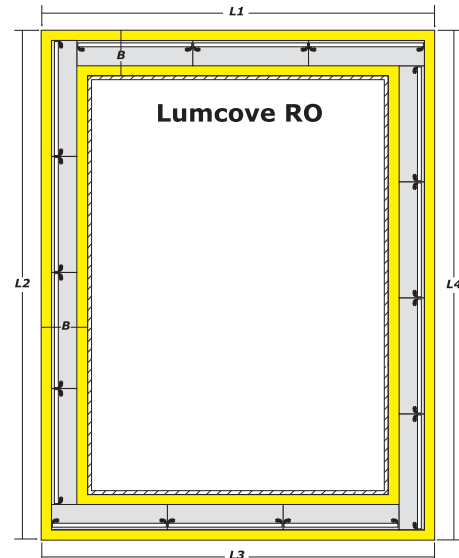

To deliver us at time of ordering: **L1, L2 and B**

## 3. CONTINUOUS LINES FORMING A SQUARE OR RECTANGLE

Cove with central opening

Cove with opening at the outside

To deliver us at time of ordering: **L1, L2, L3, L4 and B**
